

# GLUE CARE

1. Always store your glue in a cool dry place.
2. KEEP OUT OF REACH OF CHILDREN - PROFESSIONALS ONLY
3. Safety Masks are recommended, as long time inhalation and exposure can cause health problems such as; Sinus problems, headaches, eye irritation
4. To regulate the temperature of the glue, you can use a jade stone, or crystal stone. It is not recommended to use paper tape for this.
5. Replace the lid on your glue tightly and return to the foil packet with silica gel, or place in rice to keep moisture away from the glue.
6. NEVER leave in direct sunlight or heat.
7. Discontinue use if an allergic reactions occurs.
8. Shake at least 50 times to get the best consistency.
9. Avoid spillage at all times, as glue cannot be removed from fabric or carpet.
10. Contact with skin can cause irritation.
11. Only for professional use, by trained technicians.
12. Your iLash Collective glue, "Bohemian Bond" if purchased from us, likes to sit around 21-23 degrees celsius, with room humidity around 30-60%

# GLUE CARE

- For optimum results, always check your instructions for the specific glue that you use. Hygrometers are great to have, and will tell you exactly what your room temp and humidity is
- Without this, you will need to rely on your ability to guess while having issues lashing. e.g glue not drying fast enough = more humidity needed, glue drying too fast = too much humidity.
- Cyanacrylate in eyelash glue NEEDS Humidity to CURE.

To regulate your temperature and humidity, there are a few options you can choose:

To increase humidity:

- Hang wet towels or place wet cotton rounds on your clients face
- Run a Humidifier
- also increase the number of plants in your room
- Use our magic Flawless Finish product to increase your glue drying speed

To decrease humidity:

- Turn on your air con or heater
- Run a De-humidifier

# GLUE TROUBLESHOOTING

Here are some points to check, when your glue isn't performing for you.

Have your hygrometer sitting close by to measure:

High Humidity (too much moisture in the air) = Glue drying too fast

Low Humidity (not enough moisture in the air) = Glue drying too slow

How to fix glue drying too slowly:

1. Check your air con, if it is too high or too cold, you may be drying the air out & your temp may not be ideal. Our glue needs to be higher than approx 23 degrees c & humidity at least around 60%. The right temp also affects the glue viscosity! So keep an eye on both.
2. If your air con has to remain as it is, introduce a Humidifer close by & keep an eye on your hygrometer.
3. Fill your room with plants that retain moisture.
4. Wet Cotton rounds & place on your clients cheeks.
5. If you have a smallish space, hang wet towels close by.
6. Use our flawless finish serum by wetting a micro brush and wiping this along the base of your eyelash extensions while they are still on your tile. Wait a few moments to dry & begin using. This helps balance your glue!

# GLUE TROUBLESHOOTING

7. Gently spray the air around your client with a nano mister to introduce moisture. Try not to overload the lashes, as this will cause shock curing.

How to fix glue drying too quickly:

1. Again, try using your air con to dry out the air for you & regulate temp, or if weather permits, use your heater for this instead.

2. Use a dehumidifier to remove moisture from the air. Make sure you buy a size that is appropriate for your space.

3. Check that your glue has been shaken properly (not showing clear & black carbon separated) & it is not in contact with paper tape. Glue reacts to paper tape, heats up & burns with fumes.

4. Buy a slower drying lash glue, if none of these help!

5. Again, use our Flawless Finish Serum to help regulate your glue as above.

6. Try to move your lashes & glue closer to your clients face to reduce this application time. If using a glue ring, ALWAYS wear a mask to protect your sinus area & if placing lashes on your hand or clients forehead, ALWAYS practice good hygiene!

7. Use MORE glue on your extension. Sometimes if extensions aren't lasting or if they are "popping" off when brushing, you may not have used enough glue to apply them!

Try a mix of these things & let me know how you go!
